

Red Baron[®] II

On page 4 of the Multiplayer manual, the screenshot indicating the Connection Types that are available to you is different than the actual version shipped.

Red Baron II Multiplayer offers the Internet Connection Type only at the first start up. A free service patch is available now for downloading at <http://www.sierra.com/> for other Connection Types, including Modem, IPX (LAN), and Serial.

This patch is automatically applied when logging into the Sierra Internet Gaming System (SIGS) server when you choose the Internet Connection Type and connect to the SIGS server on the Internet.

For help in connecting to SIGS, please see page 5 of the Multiplayer manual. Additional help can be found on the Internet (with a Web Browser) at <http://sigs.sierra.com>.
